

1 Inputs at origin t

- z Known inputs**
- AEMO predispatch
 - PD PASA spare, net load
 - gas price, calendar
- published by t

2 Additive forecaster

Linear base

x **z**

one linear map of the history and all known inputs

Trend field (CTF)

x

trend c : smooth part of the history

z heads: c, r , net load, gas

history = $c + e +$ remainder r (decomposition loss)

Event field (DGF)

x

events e : largest departures

z heads: e , spare, predispatch

Calibrator

z

per-hour MLP on z_h , horizon and recent price

B_h

+

C_h

+

$g_h D_h$

+

δ_h

$= \hat{y}_h$
